

Atcom's Checklist for Cyber Security and Breach Prevention

Infrastructure

- ✓ **SSL Certificates.** When storing any user data gathered from websites make sure the SSL certificates are properly installed.
- ✓ **Hashed/Encrypted credentials.** Make sure that the scripts properly hash the significant information.
- ✓ **Website Updates.** If your website runs off a platform like Wordpress, regularly check for updates and set up an alert email. Install Security plugins such as [Wordfence](#) or [Sucuri](#).
- ✓ **Server Patches.** Ensure Windows servers are up to date, installing the patches when they are released.
- ✓ **Network configuration.** Check that devices, such as routers and NAS's, do not have all the defaults turned on. Disable unnecessary access protocols. Use good passwords.
- ✓ **Backup Protocols.** Have a three layer backup plan in place. System, Internal, Offsite.
- ✓ **Assessment.** Regularly contract an IT company to do a Security overhaul and assessment.
- ✓ **Firewall.** Implement an [internet security gateway, firewall and web filtering](#) onto your network. This is the best prevention at the moment against ransomware.

Workplace

- ✓ **Computer and mobile device patches.** Always up to date as soon as patches are released. Windows and apple.
- ✓ **Antivirus.** GOOD antivirus on all devices that come near your network, always up to date. *Antivirus stops a virus running various scripts on your pc, a firewall stops and signals events that leave your PC.
- ✓ **O365, Dropbox, Cloud App Security.** Additional security must be applied to Cloud Apps.
- ✓ **Password Managers.** Such as [LastPass](#), [1Password](#) and [KeepPass](#). You will need this when you start using complex passwords that are unique.
- ✓ **Long Complex Passwords.** Pass phrases, numbers-upper/lowercase-characters, generated passwords, song*lyrics. Unique to each log on.
- ✓ **2-factor Auth.** Turn on 2-factor Authentication where it is available.
- ✓ **Email Security.** (Three email accounts) Separate work email addresses from Personal use. Create a junk email address for mailing lists.

Personal

- ✓ **Email Status.** Check <https://haveibeenpwned.com> and enter your email address to see if it is in a leaked list.
- ✓ **Mailing Lists.** Create a gmail email account specifically for mailing lists and competitions.
- ✓ **Personal Email. NEVER user a work email account for mailing lists or personal social media or personal use.**
- ✓ **Spoof.** Learn how to see a [fake link](#) and how to [spot a fake email](#).
- ✓ **Phone Surveys.** NEVER give out any personal information over the phone. Social engineering. Phishing.
- ✓ **Facebook.** Logging in again to access content/quizzes – gives someone else your username and password. Cut and paste instead of share – allows a third party to search a phrase and find you and start phishing.
- ✓ **Mobile Apps.** [Particularly Android apps](#) – check out the developer before you download.
- ✓ **execution**
